

Math and Science Teacher Initiative

Chico State University

MSTI

- Programs are important
- New pathways are important
- Offering services is important
- Providing scholarships is important
- However, at Chico State, what is the most important is to...

**Establish a “teaching as a career”
culture within the College of
Natural Sciences**

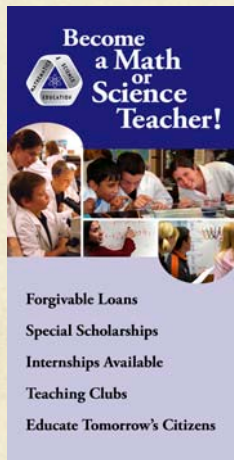

Change the Culture

How Does One
Change the
Culture?

- a) Brand the idea of “teaching as a career” with posters, advertisements, bookmarks, banners, marquees, etc.
- b) Involve (or at least inform) research faculty who teach the upper division content courses in MSTI activities
- c) Develop a new and innovative recruiting program
- d) Offer TRP and Noyce scholarships exclusively to future math/science teachers
- e) Organize and promote a Science Teaching Club, an affiliate of NSTA
- f) Get more science and math majors involved with our Hands-On Lab Programs

Educate Tomorrow's Citizens

*Become a Math or Science Teacher
You are needed!*

You may or may not be aware of the desperate need for math and science teachers not only in California, but throughout the nation. Currently, we are not coming close to meeting current, much less future, demands for teachers.

To make math and/or science teaching more attractive as a career option, many more scholarships and loan forgiveness programs have been created and dedicated for students interested in becoming future math and/or science teachers.

Take a look at the opportunities available to you as a future teacher:

- Scholarships • Reserved On Campus Housing • Forgivable Loan Program
- Early Field Experiences • Paid Tutoring Opportunities • Science Teaching Club Activities
- Project M.A.T.H. (Mathematics And Teaching on the Horizon)
