## *Professional Philosophy*

As an agriculture teacher, I am fortunate to be a part of two of the greatest industries in our country. The potential impact that my students may have on the worldwide agriculture industry is astounding. Regardless of the specific industry sector my students pursue, each is likely to contribute to the agriculture economy of our great nation. I believe that this opportunity also comes with tremendous responsibility. It is my obligation to connect my students with the leaders of the agribusiness community and to provide them with the tools necessary to meet the demands of this diverse industry. To become productive members of a global agriculture economy they must be proficient in the latest technologies and be able to communicate effectively. I accept this responsibility with great pride and passion as my contribution to the future of Agriculture.
